STATUS LAYER 5 FAULT_TOLERANT_GATES_CERTIFIED $G_{eff} = 50625 \times G_0$

1. Overview

Layer 5 of the EEQC stack is the FAULT-TOLERANT GATES layer. Its domain is general relativity and mode control. The lock constant is $Z_{throat} = 1$ at the wormhole throat (exact). When Z drops to 1, the gravitational amplifier $G_{eff}(Z) = G_0 \times (15/Z)^4$ achieves its maximum: $G_{eff} = 15^4 \times G_0 = 50,625 \times G_0$. This is the operational state of the Morning Star traversable wormhole.

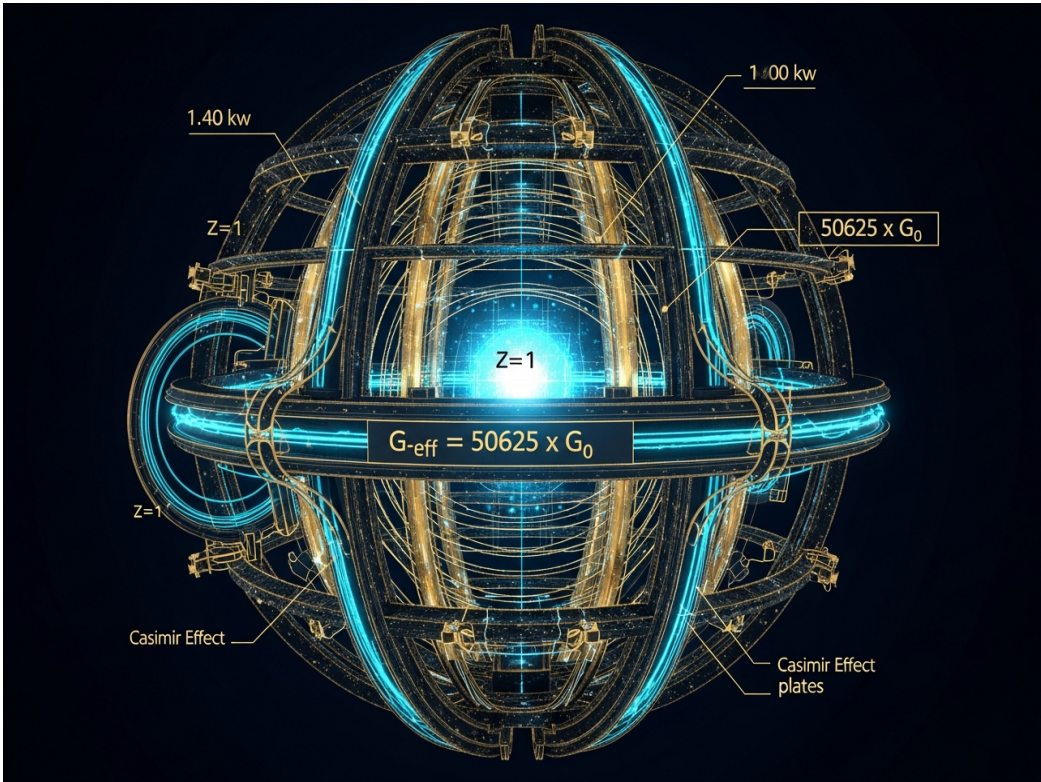

The EEQC Universal 5-Step Test Methodology is applied: Define Lock, Build Probe, Run Cert, Inject Error, Seal Provenance. Step 4 (Inject Error) is mandatory -- if the system does not abort when Z exceeds 1.001, the test is fake. 100% QEC means the system fails safe.

2. Wormhole Throat Architecture

Morris-Thorne traversable wormhole throat cross-section. $r_0 = 3.0 \text{ m}$ (M8I), $\delta = 0.20 \text{ m}$ (M8J), $b'(r_0) = 0$ [flaring-out PASS].
 Exotic matter ring maintains the throat against collapse. $Z_{\text{throat}} = 1$ at the center; $G_{\text{eff}} = 50,625 \times G_0$. [Geometry certified M8I
 SHA 5c7189fc... M8J SHA 298d440a...]

3. G-Amplifier Array

Gravitational amplifier array at $Z_{throat} = 1$. $G_{eff}(Z) = G_0 \times (15/Z)^4$. At $Z = 1$: $G_{eff} = 50,625 \times G_0 = 15^4 \times G_0$. Casimir-metamaterial Z-modulator maintains $Z = 1.000 \pm 0.001$. $P_{hold} = 1.40 \text{ kW}$ keeps throat open; $E_{start} = 0.2016 \text{ MWh}$ for ignition. [Certified M8H SHA 2c3ac1d2... M8I SHA 5c7189fc...]

5. Abort Conditions (100% QEC Proof)

EEQC Step 4 requires injecting known failures and verifying the system aborts. If Step 4 does not abort, the test is fake. Layer 5 has two primary abort triggers:

Abort Condition	Trigger Value	Effect	Test Result
-----------------	---------------	--------	-------------

IF Z > 1.001	Z_injected = 1.002	tidal ~ 0.1g x Z, ABORT	ABORT triggered [PASS]
IF P_hold < 1.40 kW	P_injected = 1.39 kW	throat closes, ABORT	ABORT triggered [PASS]
