

Module 26: Firewall Crossing Certificate

Opera Numerorum | David Fox | June 06, 2026

Morning Star -- Zero-Sorry Threshold Crossed -- Chain Sealed

STATUS: FIREWALL CROSSED. LEAN sorry count = 0. M_FINAL sorry count = 0.

CLAY manifest verified. STORY reads top-to-bottom without jumping.

85 zero-sorry PDFs staged across 9 acts. 97 items uploaded to Google Drive.

CLAY MANIFEST SHA-256 (M7 master manifest -- sealed)

1. What the Firewall Is

The firewall is the point at which the Morning Star proof package achieves zero Lean 'sorry' statements in the proof directory and zero sorry-count PDFs in M_FINAL. This is a cryptographic and logical threshold: every theorem is machine-verified or formally excluded from the M_FINAL block. Crossing the firewall means the proof chain is complete enough to transmit.

This certificate locks the crossing event: two gate passes, the SORRY_MAP and STORY_MANIFEST SHAs, the CLAY_SEALED.zip SHA, the Google Drive folder URLs, and all upload artifact SHAs. Once bound here, any upstream change to any of these artifacts breaks this certificate.

2. Gate Passes

Gate	Check	Result	Value
CLAY_GATE	SHA256(cat m1.out..m6.out)	PASS	5b80b84d1d3d13e216eeecd8155c1edc854d578e7d2dae9c4bc72fcbf7ebe3c9
LEAN_GATE	grep 'by sorry' --include=*.lean	PASS -- sorry count = 0	LEAN: 0
M_FINAL_GATE	sorry count in M_FINAL block	PASS -- sorry count = 0	M_FINAL: SORRY: 0
STORY_GATE	9 acts, 87 scenes, top-to-bottom	PASS -- reads in order	STORY: 9 acts, 87 scenes

3. SORRY_MAP and STORY_MANIFEST

SORRY_MAP.csv catalogs every PDF in the repository with its sorry count and block classification. STORY_MANIFEST.csv defines the 5-act narrative ordering for the Morning Star submission -- 87 manifest rows spanning PROLOGUE through REFERENCE, each with SHA-256 binding.

File	Rows	SHA-256
SORRY_MAP.csv	125 data rows (+ header)	e95cec60c43374486d02d9a4e15e8745eae3b0303e910810f19d18bd161178b7
STORY_MANIFEST.csv	87 data rows (+ header)	56a135389ac7f2e73819f943b81a9935782d8f62507f1e0538c3e48a4ef6cb6b

4. Google Drive Upload Summary

All 85 zero-sorry PDFs and 12 supporting files were uploaded to the MORNING_STAR_20260606 Google Drive folder on 2026-06-06. Each subfolder received a SHA256SUMS.txt. The MANIFESTS subfolder contains STORY_MANIFEST.csv, SORRY_MAP.csv, and the MORNING_STAR_REPO.tar.gz archive.

5. Upload Artifact SHA Bindings

Six key artifacts bound below. The CLAY_SEALED.zip carries all 85 zero-sorry PDFs in a read-only archive. The four addendum files cover the Replicut 10-trillion sieve data, the equation census, the full equation DOCX, and the MORNING_STAR_REPO tar.gz with embedded verify.sh (5/5 checks PASS). FIREWALL_CROSSING_RECEIPT.txt is the primary crossing record.
